

## WHAT IS IN YOUR BABY'S FUTURE?

TAKE THE **FIRST STEP** TO MAKE IT HAPPEN

*Newborn screening identified G6PD in Ayden, seen above with his mother. He is healthy, plans to eat lots of ice cream and then, maybe, attend IIT.*

**First Step** screens newborn babies for over 50 genetic and metabolic disorders that are treatable. Babies who suffer from these disorders typically have no visible signs of illness when they are born. If these disorders go undiagnosed it will lead to mental retardation, physical disability or even death. Early detection of these disorders with **First Step** can lead to treatment and a healthy outcome. Nobody can predict your baby's future but you owe him or her the best start in life.

Ask your pediatrician or contact us to find out more about the **First Step** Newborn Screening Test and how it can give your baby the best start in life.
